Axis Telecom: mobile broadband for all the family and business users alike. Axis telecom provides sensible telecoms solutions for home and business users alike. You can really save alot of cash by using the same phone for your home and phone broadband. Does this really work? Well, to some extent it depends on the absolute speed of your internet connection required. 3G is fast, but it is not as quick as cable. Most people do not require very fast connections, so it depends on your circumstances. If you are a programmer or software developer, you will not be able to use a 3G connection for your business use as it would not be quick enough, but for most people 3G is absolutely fine. 3G is available in most cities in the UK, but not in all towns at present. You can check your 3G coverage in your area online. Check out the **axis telecom site** for more information.
